EcoPett™

PREMIUM WOOD PET BEDDING

Consistent Texture:

EcoPett™ manufacturing specifications provide a softened fiber that will be larger, more consistent, and longer lasting than other brands. You can count on the same high-quality product every time.

High-heat Treated to Remove Allergens:

In the pelletizing stage, the wood is high-heat treated removing tars, oils, hydrocarbons and other potential allergens.

The Power of the Pellet:

The EcoPett™ pellet is compressed under high pressure. This pellet will expand up to 5 times its size when exposed to moisture. Pound for pound, the EcoPett™ pine pellet will be the most absorbent bedding you can find.

Highly Absorbent:

The wet spot will actually clump for fast and easy removal. We recommend 3 – 4 inches of depth in the stall. This will provide the bedding needed to trap the urine quickly, avoid spreading of the wet spot, which will reduce ammonia levels and waste less bedding.

More Room for Hay:

The EcoPett™ pine pellet is packaged in a 40-pound bag that will require about 1/3 the space of a traditional, flake-shaving bale. Since you will use less too, your storage requirements will be reduced by 2/3 to 3/4. Additionally, our pallets are wrapped and capped for safe outside storage.

Your horse will bed on the soft fiber that makes the pellet. It is comfortable, shock-absorbing, and aesthetically pleasing.

Reduce Consumption and Disposal:

EcoPett™ pine pellet bedding will greatly reduce your bedding consumption and disposal over traditional, flake-shavings or straw. Some farms have suggested 70% consumption and disposal reductions with our bedding. While the pellets may be slightly more expensive per bag than traditional shavings (not in all areas), you should cut your consumption by 30 – 50%. If you do the math, (or we'll do it for you) we expect that you should save no less than 25% up to 50% on your bedding costs. If you pay to have your manure hauled away, or pay someone to spread it, you will save by reducing your disposal by 30, 40 up to 50% as well!

Save Time Cleaning Stalls:

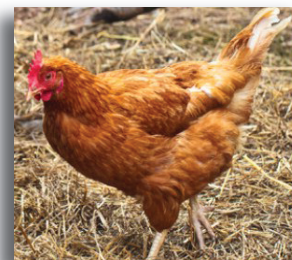

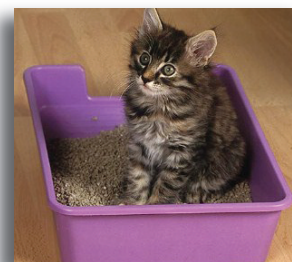

EcoPett™ horse bedding pine pellets will clean stalls in a fraction of the time.

Step-by-step Instructions:

(Based on a 12' X 12' stall) We recommend 5 – 6 bags of our premium pine pellet bedding to start a 12 x 12 stall. Bedding can be softened by lightly sprinkling with water. This will provide about 4 inches of bedding after the pellet softens completely. This depth will provide quick absorbency and trapping of the wet spot reducing ammonia levels and spreading of the wet spot in the stall. You will ultimately use less bedding if you start the stall with this amount of bedding and maintain the average of 4 inches of fiber.

Packaging:

Easy-to-handle 40-pound bags
